

Capital Regional District Sewage Treatment

Clean, green, affordable, public

Residents of the Capital Regional District will be making an important decision on the future of sewage treatment in the Greater Victoria area.

While the B.C. government wants to see proper sewage treatment done as a public-private partnership or P3, the CRD board and residents should have the right to make up their own minds.

There are many innovative approaches to sewage treatment, such as the Swedish model proposed by Stephen Salter, that are public and cost-effective. CUPE believes that water and sewer services should remain publicly operated and managed, particularly given their important role in public health and the environment.

This website offers information, analysis and links related to sewage treatment in the CRD.
